In the end, most abiotic stresses affect the plant cells in the same manner as do water stress and temperature stress. Wind stress can either directly damage the plant through sheer force; or, the wind can affect the transpiration of water through the leaf stomata and cause desiccation.

Abiotic Stresses: Plant Resistance Through Breeding and ...

Plant breeding is seen as an attractive approach to the problem of abiotic stress because it is seen as an efficient and economic means to increase crop yield. It also has the potential to increase productivity by extending growing seasons, allowing marginal land to be brought into cultivation, and allowing more productive crops to be chosen ...

Plants are constantly confronted to both abiotic and biotic stresses that seriously reduce their productivity. Plant responses to these stresses are complex and involve numerous physiological, molecular, and cellular adaptations.
